

## UNRIVALED ENGINE PROTECTION

The High-Performance Duramax Diesel pictured below was beginning a competitive pull while using TriboDyn 15W-40 Synthetic Blend Heavy Duty Engine Oil. Upon the start of the pull, the oil pump busted leaving the diesel truck with an oil pressure reading of zero. He continued the pull because he knew the strength of TriboDyn PATENTED Performance Lubricants. Continuing a pull like this with zero oil pressure would typically mean death and a total rebuild. However, upon engine maintenance after the race, we received these pictures from the driver shown below. Everything internally was in great shape and the bearings remained 100% intact and useable.
